### **DETAILED ACTION**

1. Figure 14 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The disclosure is objected to because of the following informalities.

The Summary of Invention is not considered to be clear and concise as required by M.P.E.P. 608.01(d), which states that the Summary of Invention should describe the subject matter of the invention in one or more clear concise sentences or paragraphs.

On page 14 the sentence appearing on lines 3-5, which refers to claim 1, should be deleted.

On page 14 the sentence appearing on lines 13-14, which refers to claim 2, should be deleted.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2852

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeda et al. (US 5,327,339).

Takeda et al. (...339) disclose an image forming apparatus comprising: a photosensitive member (3) adapted to have an electrostatic latent image carried thereon; a developing unit (figure 6) including a developer carrying member (22) rotatable in a direction (b) against gravity at a point closest to the photosensitive member (col. 13, lines 26-30), and a cover for sealing a developer to be conveyed by the developer carrying member therein (figure 6), where the developer carrying member carries and conveys the developer stored in the cover to develop the electrostatic latent image on the photosensitive member (col. 13, line 60; and col. 14, line 9-20); and a clearance regulating member provided so as to be free from contact with a surface of the developer carrying member, where the clearance regulating member regulates a clearance for an upper side of the developer carrying member, and it is inherent that the clearance has a width not smaller than the developing width on the developer carrying member (figure 6), wherein the clearance between the developer carrying member and the clearance regulating member is determined at a size not greater than a maximum height of the developer projected from the surface of the developer carrying member (figure 6). The developer carrying member is configured to have magnetic poles (23a, 23b, 23c, 23d, 23e). The clearance for the developer carrying member provided by the clearance regulating member is determined at a size not greater than a height of a magnetic brush of the developer at a magnetic pole just downstream of a clearance regulated position in terms of rotation of the developer carrying member, and at a size not greater than a gap between the developer carrying member and the photosensitive member (figure 6). A position where the clearance is regulated by the clearance regulating member is

Art Unit: 2852

located between a magnetic developing pole (23b) and a magnetic pole (23d) located downstream of the magnetic developing pole in terms of rotation of the developer carrying member (figure 6).

***Prior Art***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tabuchi et al. (US 4,338,880), Nishikawa (US 4,377,334), Hosaka et al. (US 5,001,517), Yamashita et al. (US 5,659,861), Ito et al. (US 5,758,240) and Sudo (JP 09-034265) disclose an image forming apparatus including a developing unit.

***Contacts \ Inquiry***
